

User driven Climate Information delivery

CIP highlights:

Comprehensive guidance text

CMIP3 GCM maps and projections

Station scale projections

The Climate Information Portal (**CIP**) has been developed by the Climate System Analysis Group (**CSAG**).

CIP goes the next step beyond traditional climate data delivery by providing an integrated delivery of structured guidance text alongside simple but effective visualisations and spatial maps.

- For the more advanced user, spreadsheet downloads of time series data are available

During the course of 2012 major enhancements will be implemented. Most critically these will include the provision of **CORDEX** RCM and statistically downscaled climate projections.
